# WeTrack - Keep your goals on track

—

Team : **HTML-01**

Project Domain : **Education**

Project on : **Goal Tracking**

Project Overview

WeTrack - is a **goal tracking application** designed for people who want to keep their academic goals on track. With a primary feature of **setting goals,** and **add ons** such as **motivational quote generation** , **a resource hub** and **tips and tricks.** We plan to build this using **HTML, CSS, Bootstrap and Vanilla Javascript, (maybe a bit of jQuery)** . We might also try and convert this into a **PWA** if time permits.

Learning Goals

- June 2020 : In the first month we will be focusing on **HTML and CSS** by going through MDN documentation**.** We will start building a personal project after revisiting different tags and understanding our needs. Also along with this we will be getting some knowledge on **Version Control tools.**

- July 2020 : July will be the time we will be **exploring animations, Bootstrap and Javascript.** We will add this to our personal learning project and finish it off by July mid. Post July-mid we start with designing of the basic User Interface for our Goal Tracking portal .

- August 2020 : August will be the time we focus on adding functionalities using **Javascript** to our Goal tracking app**,** and will be **deploying** the same during the first half of the month. If time permits we will work on changing the same into a **PWA**.

Milestones

I.   June 2020

The first milestone for us will be the HTML and CSS code completion for our portfolio. We will also get an overall insight of Version control.

II.   July 2020

Second milestone is finishing off our portfolio which we will be making to explore the domain HTML-CSS and JS. Also by this month's end we will be finishing off the basics of HTML and CSS for our website.

III.   August 2020

Our final milestone will be deploying our project and we will be exploring PWA as well and try to convert the Goal tracking application into a PWA.
